WELCOME

VirtuaWin - The Virtual Desktop Manager

VirtuaWin is a virtual desktop manager for the Windows operating system (Win9x/ME /NT/Win2K/XP/Win2003/Vista). A virtual desktop manager lets you organize applications over several [virtual desktops](#) (also called 'workspaces'). Virtual desktops are very common in Unix/Linux, and once you get accustomed to using them, they become an essential part of a productive workflow.

VirtuaWin is designed to be simple and elegant to use yet still be highly configurable and extensible.

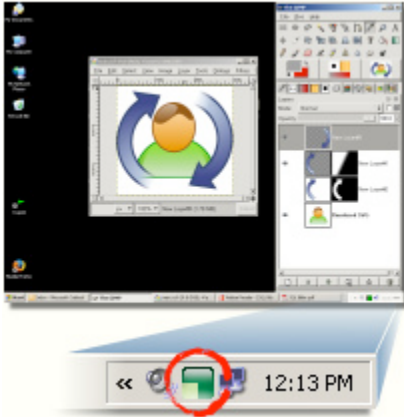

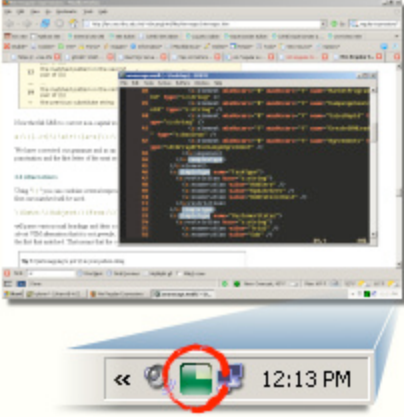

RECENT RELEASES

AutoSwitcher 2.1

AutoSwitcher has been updated with a hot key setting for enabling/disabling the switching.

VirtuaPlus module update

In response to a user request, VirtuaPlus module has been updated to version 1.3 which brings a new feature. Well it is not a full feature, but probably an add-on to an existing one - run parameters for Startup items. Have fun!

Have as many as 9 virtual desktops on Windows with VirtuaWin!

VirtuaWin is a freely distributed program and is licensed under the [GNU General Public License](#).
