Downloads

Download Rightload

You can get the latest stable version here:

Download Rightload 1.9!

Upload Plugins

From version 1.6, Rightload supports custom upload plugins that can handle a wide variety of server types. This will become the preferred way for uploads, replacing the pre-defined server files. The latest version already comes with plugins for **Facebook**, **Flickr** and **Imageshack**.

Additionally, the following plugins are available. Please extract them to a folder called "plugins" in your Rightload program directory. Then, restart Rightload, open the options and enable the desired plugins in the "Plugins" tab.

- [Waffleimages](#)
Private Imagehost for SomethingAwful.com

Pre-defined Server Files

These files contain pre-defined HTTP upload servers that you can add to Rightload without having to set their options manually. To import them, save the XML file to your computer with right-click -> "Save Link As..." and then use "Tools" -> "Import servers..." from your Rightload menu.

64 bit Compatibility

Starting from version 1.7, Rightload also contains a context menu extension that should work with 64 bit systems. This is highly experimental, though, and does not seem to work for some people right now. Instead, we recommend you use the Send To shortcuts.

Changelog

- **Version 1.9**
 - New: Can upload images from clipboard (e.g. screenshots)
 - New: Can upload files from URL (download and re-upload)
 - New: Added image resize options to main window
 - New: Can delete files from HTTP servers (only works with rapidshare.com right now, make sure to download the updated server file)
 - Removed: Vista x64 Context Menu because of explorer.exe crashes - please use SendTo shortcuts instead!
