Overview

Welcome to the homepage of FileZilla, the free FTP solution. Both a client and a server are available. FileZilla is open source software distributed free of charge under the terms of the GNU General Public License

Support is available through our [forums](#), the [wiki](#) and the [bug and feature request trackers](#).

In addition, you will find documentation on how to compile FileZilla and nightly builds for multiple platforms in the development section.

Quick download links

Download FileZilla Client

All platforms

Download FileZilla Server

Windows only

Pick the client if you want to transfer files. Get the server if you want to make files available for others.

News

2010-03-21 - FileZilla Client 3.3.2.1 released

New features:

Remember location of update download directory

Bugfixes and minor changes:

Cancel file renaming on actions that change the file list, such as changing sort order or performing a refresh

Cancel file renaming if starting a drag&drop operation

Filter invalid characters if downloading through double-clicking files or if adding from the search dialog
Fix site-specific bookmarks menu
The menu did not reflect initial value of preserve timestamp option properly
MSW: Keep FileZilla subdirectory in startmenu when updating, preserves custom order
MSW: Add AppID support to installer

2010-02-21 - FileZilla Client 3.3.2 released

New features:

*nix: Add support for forward and backward mouse buttons

Bugfixes and minor changes:

Speed limits can be re-enabled on SFTP connections
Changed settings did not come into effect unless FileZilla was restarted
Small performance improvements

2010-02-14 - FileZilla Client 3.3.2-rc2 released

Bugfixes and minor changes:

Spelling fixes
Rebuilt due to timer problems

2010-01-02 - Subversion repository moved

The address of the subversion repository has changed.

The old address, ~~[http\(s\)://filezilla.svn.sourceforge.net/svnroot/filezilla](http(s)://filezilla.svn.sourceforge.net/svnroot/filezilla)~~ is no longer valid. The new address is [http\(s\)://svn.filezilla-project.org/svn/](http(s)://svn.filezilla-project.org/svn/)

The new repository can be browsed using <http://svn.filezilla-project.org/filezilla/>.

2009-03-03 - Security advisory

FileZilla Server 0.9.31 fixes a buffer overflow in the SSL/TLS code.

This vulnerability could potentially be used for denial of service attacks.

Affected versions

All versions prior to 0.9.31 are affected. This vulnerability has been fixed in 0.9.31

2008-07-24 - Security Advisory

FileZilla 3.1.0.1 fixes a vulnerability regarding the way some errors are handled on SSL/TLS secured data transfers.

If the data connection of a transfer gets closed, FileZilla did not check if the server performed an orderly TLS shutdown.

Impact

An attacker could send spoofed FIN packets to the client. Even though GnuTLS detects this with GNUTLS_E_UNEXPECTED_PACKET_LENGTH, FileZilla did not record a transfer failure in all cases.

Unfortunately not all servers perform an orderly SSL/TLS shutdown. Since this cannot be distinguished from an attack, FileZilla will not be able to download listings or files from such servers.

Affected versions

All versions prior to 3.1.0.1 are affected. This vulnerability has been fixed in 3.1.0.1
