**Housing Proposals Grid — Cities and towns usually mandate saving a specific amount of land for parking to go with any new building. A state legislative proposal would eliminate some parking mandates, and instead allow more flexibility for homebuilders, businesses, and property owners to determine how much parking is needed for a specific site**

A state study has estimated we need 379,000 new homes to meet our housing needs here in Connecticut. Generally speaking, do you [support or oppose] this proposal?

## Landlord Requirements

The state legislature is considering proposals to address Connecticut's housing challenges. One proposal would require landlords to offer to renew leases of current tenants and have a valid legal reason to evict someone renting a home, rather than allowing arbitrary evictions. Valid legal reasons would include non-payment of rent or violating the lease. Generally speaking, do you [support or oppose] this state legislative proposal?

## Stairway Requirements

The state currently requires apartment buildings that are over three stories tall to have two stairways. This can make these buildings harder and more expensive to build. Would you [support or oppose] allowing apartment buildings up to six stories tall to be built with a single stairway, provided they have sprinklers and other fire safety measures?

# Regional Plan Association Connecticut Housing Survey October 2025

Online sample of 800 Connecticut voters fielded from October 01 to October 08, 2025.

Margin of error: +/-4.1%.

This survey is based on 800 interviews conducted by YouGov on the internet of Connecticut registered voters. The sample was weighted according to gender, age, race/ethnicity, education, and Connecticut state region based on voter registration lists, the U.S. Census American Community Survey, and the U.S. Census Current Population Survey, as well as 2020 Presidential vote, 2022 midterm election turnout, and approximate 2024 Presidential vote based on available results. Some questions withheld for future release. Respondents were selected from YouGov to be representative of registered voters. The weights range from 0.19 to 6.07 with a mean of 1 and a standard deviation of 0.64.

The margin of error (a 95% confidence interval) for a sample percentage  $p$  based upon the subsetted sample is approximately 4.1%. It is calculated using the formula:

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where  $CV$  is the coefficient of variation of the sample weights and  $n$  is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey. Some questions withheld for later release.
