fellowship  
34  
1939

Clark University

Mathematics

A swell problem  
maybe he could do more with  
it than a more brilliant  
math scientist.

I wonder how much help toward  
his problem he would get from  
just one more year of graduate  
study at Northwestern -  
If he wants to work on this problem  
(instead of simply finding out  
some more grad. study) I should  
think work with the general College  
people at Minneapolis would be better  
Because of the subject I suggest we  
discuss him and to (unlike of bel) (top interest)  
work him
