ACCESS PLUS TELEPHONE SYSTEMS: ACCESS CONTROL + VOICE COMMUNICATION

A Custom System in 3 Simple Steps

1. Identify Your Property Type

- Multi-Resident, Private Home, Small Business, Mixed use.

2. Is Voice Communication required for guests?

- 27 Auto-dial numbers using the central office phone service.
- Connect with up to 23 telephones with the 1816 Access Plus "No Phone Line" module (central office phone service not required).

3. How Many Access Points?

- Control up to two (2) doors or gates via a touch-tone telephone.
- Access control for up to six (6) additional entry points using cards, keypads or RF control.

The Access Plus Telephone Entry line offers many of the same features as a full blown access control system, but for smaller applications at a much lower cost. These are PC programmable systems that are designed for up to 27 users, can control two entry points and are easily expandable to control an additional six entry points.

Use your PC to customize your access control system. After installing the Access Plus Account Manager software, you can connect to the system via Cellular, Internet, or Plain Old Telephone Service (POTS)* and begin to customize the system immediately. Set up time zones, add or delete names, phone numbers, access codes; set up email notifications, and even lock or un-lock a door with the click of the mouse. *DoorKing cannot guarantee modem communication using POTS lines and this type of connection is not recommended for programming purposes.

Software

Program and monitor access activity from your PC.

Command open from the computer.

The DKS Access Plus Account Manager Software (.exe file) is available as a free download from the

DoorKing web site: www.doorking.com/software

Enhanced Features

- Manage multiple systems.
- Create new accounts
- Program card and transmitter numbers
- Set hold open time zones and holiday schedules

SYSTEM EXPANSION:

Card Readers & Keypads

DoorKing carries a full line of DKS, AWID and HID proximity card readers and cards. DKS 1500 Series Keypads provide access control for virtually any application where stand-alone digital code entry is desired.

Wiegand Converter

Accepts input from 26-bit wiegand devices and then converts this data to RS-485 protocol for communications with the Access Plus system.

1816 Access Plus

Expands the capabilities of the Access Plus systems (except 1838) to include facilities without active phone service.

RF MicroPlus Proximity Readers

Remote operation of vehicular access gates from the safety and convenience of a vehicle. MicroPLUS® RF products provide the highest level of security available.

ACCESSORIES:

Cellular Connection

A wireless solution for connecting managers and users to access control systems. Voice and data via the AT&T 4G LTE network (requires DKS cellular subscription).

Internet Connection

The 2334 adapter connects to your Internet and provides both voice (VoIP) and data service for your Access Plus system (requires DKS data over Internet subscription).

Add-on Directories

Three different directory models are available, and are typically used when electronic type directory systems are unavailable or don't make economic sense. Non-lighted directories models hold up to 20 or 60 names. The lighted directory model is available in surface or flush mount. Create your own directory on a single sheet that easily slips into lighted enclosure.

Mounting Posts

Mounting posts can be used for vehicular or pedestrian traffic, and are designed to be pad mounted or mounted using the in-ground mounting adapter. The Standard mounting posts are ideal for smaller telephone entry and access control devices. The Architectural style posts are designed for the larger telephone entry systems.
