

Features

- Remote fireman's handset

Description

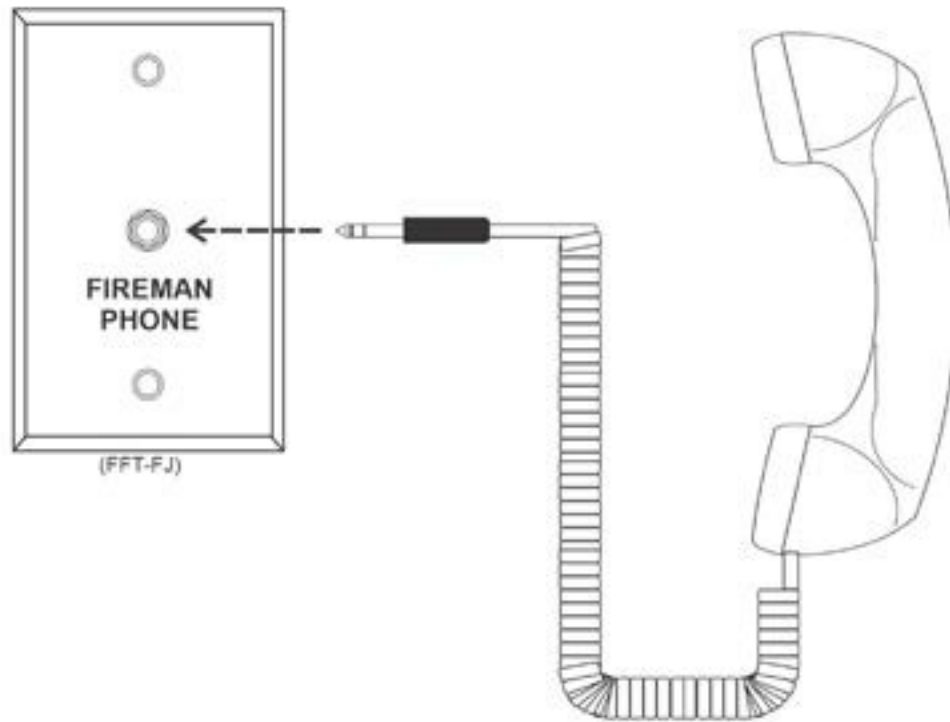

The FFT-RFH is a remote fireman's handset used to establish 2-way communication across phone circuits between the remote areas and FFT-1000.

In operation, an FFT-RFH (Remote Fireman's Handset) is plugged into an FFT-FJ (Fireman's Phone Jack) which will ring at the FFT-1000. The operator can then pick up the master handset at the FFT- 1000, select the corresponding switch, and establish 2-way communication with the remote handset.

Technical Specifications

Operating Temperature	0°C-49°C (32°F-120°F)
Operating Humidity Range	10%-93% @ 30°C (86°F) noncondensing humidity
