SMARTdiagnostics 4.47 Web Release Notes

More Visibility, Better Context, and a Refreshed Experience
This release focuses on helping users better understand their data, stay informed across locations, and work more efficiently. You'll see improvements to reporting, filtering, notifications, and issue visibility, along with visual updates as part of our ongoing rebranding.

New Features

- **Sensor Age Display**
  Sensors now display an Age field, providing quick context on how long a sensor has been in place. This information is available on the sensor details page and modal.

- **Corporate-Level Dashboard**
  A new corporate dashboard provides insights into deployment, activity, and value across locations, with flexible filtering to help users focus on what matters most.

- **Resolution Date Filter in Desk**
  Users can now filter issues based on whether a resolution date is present, helping separate resolved and unresolved work more easily.

- **View History of Issue Access**
  Users can now see a history of who has viewed an issue, adding transparency and context around issue engagement.

Improvements to Existing Features

- **Editable "Measure Of" for Time Series Indicators**
  Users can now update the *Measure Of* field after creation for general time series indicators, with changes automatically recorded in the activity log.

- **Required Fault Type for Machine Health Issues**
  The Fault Type field is now mandatory for both draft and published issues, ensuring clearer and more consistent issue classification.

- **Enhanced "All Activity" Email Notifications**
  All Activity notifications now include the corporation and location in both the subject line and email body, making updates clearer for users managing multiple sites.

- **Saved Plot Timestamps in Desk Issues**
  Plots saved to desk issues now retain their timestamps, ensuring important context remains visible during review and annotation.

- **Persistent Filters and Sorting**
  Filters and sorting selections on overview pages are now preserved after refresh, including toggling between all and favorite locations.

- **Improved Visibility into Issue Activity**
  Users can now see who has recently viewed updates on a Machine Health Issue, with avatars displayed for quick recognition of engaged stakeholders.

Visual & Branding Updates

- **Updated Colors, Fonts, and Login Visuals**
  SMARTdiagnostics now reflects updated colors, fonts, and login imagery as part of our rebranding effort.

Bug Fixes & General Improvements

- This release also includes behind-the-scenes fixes and performance improvements to ensure a smooth and reliable experience.
