TM Forum Open APIs

Conformance Certification

Company Name: Verizon

TM Forum Open API Name: TMF645 - Service Qualification Management

TM Forum Open API Release Version: 4.0.0

Report Date: 18/01/2024
1. **What Product or Solution does your API support?**

Verizon value provides services with different Carrier options to prepaid customers. This API will be used to check the availability of services provided by Carrier at a given location.
2. **Overview of Certified API**

Service Qualification API is one of the Pre-Ordering Management APIs. Service Qualification API goal is to check service availability at given Customer location.

API can take the customer's device serial number (IMEI), SIM Card and Zip code as input and give the availability of the carrier’s service for that particular customer’s device and market segment. The API returns the response message with the reason for not being eligible. e.g., If the reason is due to an incorrect SIM then the API response message says "Invalid SIM profile" so eligibility can be re-checked with a different SIM card.
