Report Date: 14/03/2024
1. **What Product or Solution does your API support?**

Comviva's Digital BSS suite is a comprehensive and specialized solution tailored for OTT subscription services, providing end-to-end support for the entire service ecosystem. It facilitates efficient resource management, streamlines operational workflows, and ensures lifelong support for the subscriber base. With a unified interface that spans multiple operational aspects, OTT service providers can seamlessly manage the entire subscriber lifecycle. Comviva's Digital BSS suite offers a consolidated view of operations, enabling operators to prioritize subscriber needs and exceed their expectations. Through a centralized repository and adaptable workflows, the suite adeptly handles a wide array of subscriber queries, thereby enhancing customer services, boosting satisfaction, and enabling a more targeted marketing approach.

Comviva's Digital BSS suite solution represents a cutting-edge Provisioning and Customer Care solution, unifying critical business processes and workflows specific to OTT subscription services. It empowers Customer Care personnel to effectively and efficiently address customer problems, queries, and requests, ensuring a seamless and responsive customer experience.

2. **Overview of Certified API**

Test Environment Management is a critical feature within the Comviva CRM Product. The Test Environment Management API provides a standardized interface for both internal and external entities to oversee and control test environment activities within the platform. Through this API, users can perform the following operations:

- **List Test Environments:**
  - This operation retrieves a list of test environment entities, allowing users to view ongoing and completed test environment.

- **Retrieve Test Environment by ID:**
  - This operation retrieves a specific test environment entity based on its unique identifier, enabling users to access detailed information about a particular test environment.

- **Create Test Environment:**
  - This operation initiates a new test environment entity, enabling users to commence new test activities and assign relevant parameters.
• **Update Test Environment:**
  - This operation facilitates updates to existing test environment entities, allowing users to modify parameters, statuses, or other relevant details as needed during the test environment lifecycle.

• **Delete Test Environment:**
  - This operation enables users to remove a test environment entity from the system, providing flexibility in managing test environment data and resources effectively.

By leveraging the Test Environment Management API, users can efficiently oversee and manage test environment activities, ensuring thorough testing and validation of the Comviva CRM Product.
