1. **What Product or Solution does your API support?**

Comviva's Digital BSS suite is a comprehensive and specialized solution tailored for OTT subscription services, providing end-to-end support for the entire service ecosystem. It facilitates efficient resource management, streamlines operational workflows, and ensures lifelong support for the subscriber base. With a unified interface that spans multiple operational aspects, OTT service providers can seamlessly manage the entire subscriber lifecycle. Comviva's Digital BSS suite offers a consolidated view of operations, enabling operators to prioritize subscriber needs and exceed their expectations. Through a centralized repository and adaptable workflows, the suite adeptly handles a wide array of subscriber queries, thereby enhancing customer services, boosting satisfaction, and enabling a more targeted marketing approach.

Comviva's Digital BSS suite solution represents a cutting-edge Provisioning and Customer Care solution, unifying critical business processes and workflows specific to OTT subscription services. It empowers Customer Care personnel to effectively and efficiently address customer problems, queries, and requests, ensuring a seamless and responsive customer experience.

2. **Overview of Certified API**

The General Test Artifact Management is a critical feature within the Comviva CRM Product. The General Test Artifact Management API provides a standardized interface for both internal and external entities to oversee and control test environment activities within the platform. Through this API, users can perform the following operations:

- **List General Test Artifacts:**
  - This operation retrieves a list of general test artifacts entities, allowing users to view ongoing and completed test artifacts.

- **Retrieve General Test Artifact by ID:**
  - This operation retrieves a specific general test artifact entity based on its unique identifier, enabling users to access detailed information about a particular test artifact.

- **Create General Test Artifact:**
  - This operation initiates a new general test artifact entity, enabling users to commence new test artifact and assign relevant parameters.
