TM Forum Open APIs

Conformance Certification

Company Name: ZIRA

TM Forum Open API Name: 
TMF676 – Payment Management

TM Forum Open API Release Version: 4.0.0

Report Date: 02/05/2024
1. **What Product or Solution does your API support?**

   At stc, our development of TMF676-compliant APIs is centered on establishing a foundational framework for payment management that seamlessly integrates with both existing and future backend systems. This "skeleton" framework is designed to facilitate efficient and secure processing of payments, supporting a wide range of payment methods and channels. By adhering to TMF676 standards, the framework ensures robust support for managing payment transactions, including invoicing, collections, and reconciliation processes, thereby enhancing financial accuracy and reducing operational risks. The modular and scalable nature of this API design allows for easy enhancements and integration of additional functionalities as financial technologies evolve and customer payment preferences change. This strategic approach not only improves operational efficiency but also ensures compliance with financial regulations and industry best practices, enhancing customer trust and satisfaction by providing reliable and secure payment services. The API framework lays a robust foundation for a comprehensive payment management system that supports dynamic and efficient financial transactions, enabling stc to handle payments effectively and maintain its leadership in the telecommunications industry.

2. **Overview of Certified API**

<table>
<thead>
