

TM Forum Open APIs

Conformance Certification

Company Name:

Digitata Networks

Product Name and Release Version:

Infinity Connect v1.1

TM Forum Open API Name and Release Version:

TMF641 - Service Ordering Management v4.1.0

Date: 27/02/2026

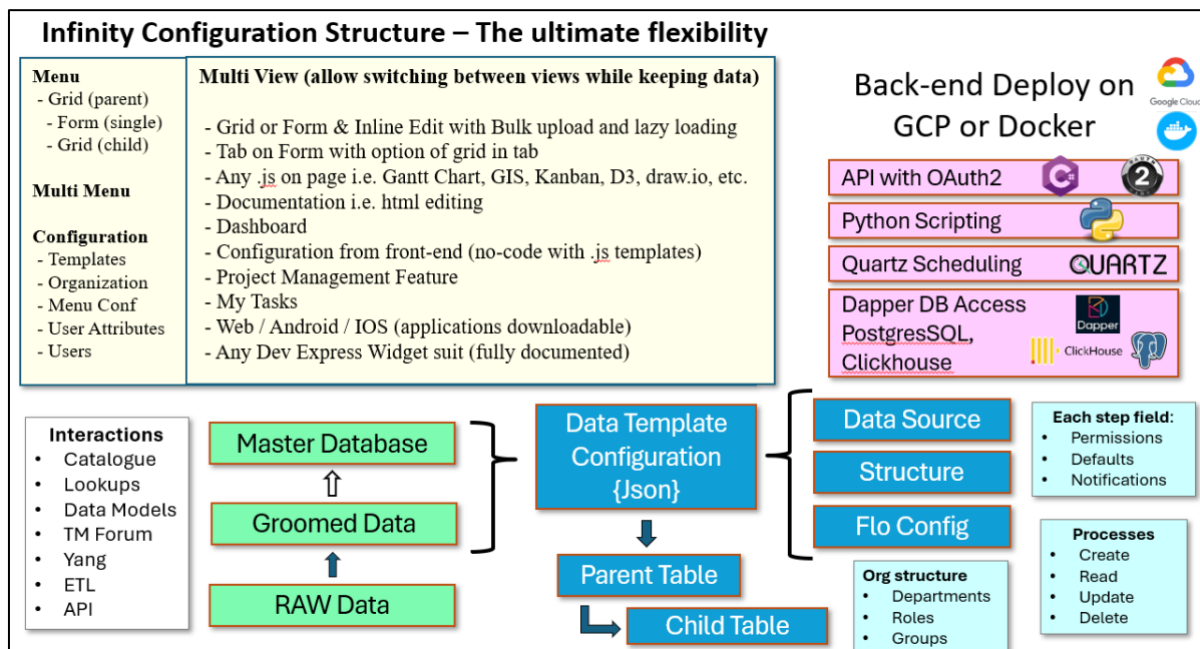

1. What Product or Solution does your API support?

The product for all the TM Forum API's is a gateway product that allow for interface between the Infinity suite and the relevant system. It's called Infinity Connect.

2. Overview of Certified API

We comply to all the fields in the TMF641 with Full CRUD operations. The specific implementation with our potential customers will make use of the relevant fields as per the project definition.

3. Architectural View

Infinity is a no-code / lo-code configuration environment where we can design data templates with relational structures etc as shown in the diagram above.

The Infinity Connector is a plug-in to this that allows for the relevant table to be used via the TMF API interface. For example, usecase for Service ordering (to create, update or retrieve service with necessary order parameters) on the Infinity platform, the TMF641 will be pointing to the relevant table that represents the Inventory.
