Company Name:

ENTEEL

Product Name and Release Version:

Open eXperience Layer 2026

TM Forum Open API Name and Release Version:

TMF664 – Resource Function Activation

Management v.4.0.0

Date: 23/03/2026

1. What Product or Solution does your API support?

This API provides a mechanism to manage the activation and deactivation of resource functions within a service provider's environment.

Communication Service Providers (CSPs) are constantly working to make their platforms more connected and adaptable. But every time a new feature is introduced, it often means building a new API or making changes to multiple systems. This slows down the launch process, making it harder to meet market demand and missing out on potential revenue.

To move faster and deliver better, more tailored experiences, CSPs need to adopt standard APIs like OpenAPI-TMF. These standards help everyone, from CSPs to vendors, speak the same technical language. That means simpler integration, quicker project delivery, and a smoother path to innovation

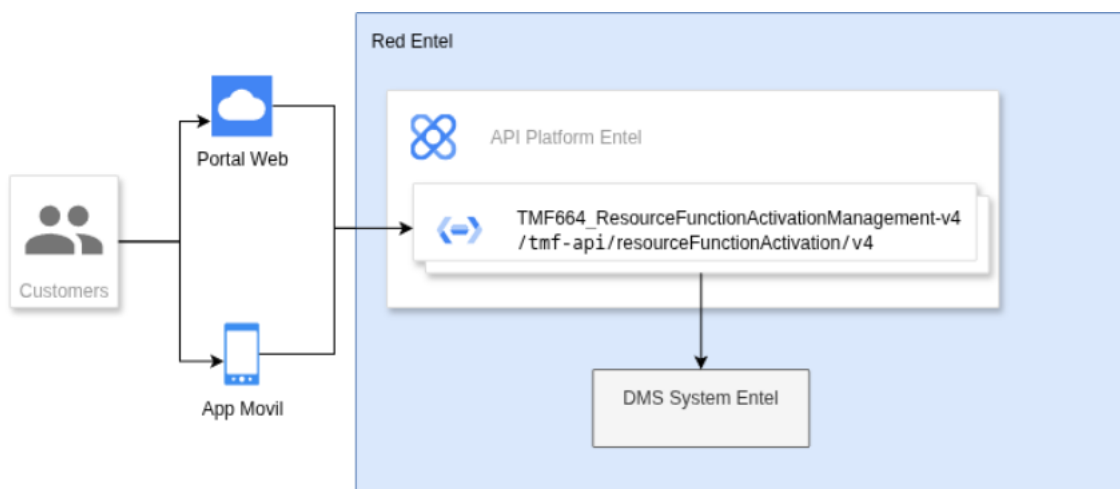

2. Overview of Certified API

The Resource Function Activation Management API (TMF664) allows for the standardized management of resource function activations, including creation, retrieval, update, and deletion of activation requests and their associated state changes. It is crucial for automating service fulfillment processes.

#	Resource	API Overview	Operations Supported
---	----------	--------------	----------------------

1	Function Activation resource	Represents a request to activate or deactivate a specific resource function, including its current state and related entities.	<ul style="list-style-type: none"> ● POST ● GET ● PATCH
---	-------------------------------------	--	--
