1. What Product or Solution does your API support?

Amdocs Kenan is a comprehensive and robust system that delivers superior order management and fulfillment capabilities for any service and plan type. Amdocs Kenan billing system offers easy integration with REST and TMF APIs, making it compatible with other systems and applications.

With the **TMF-622 Product Ordering Management API**, Amdocs Kenan billing system provides Communication Service Providers (CSPs) with the capabilities to manage product orders throughout the complete order lifecycle—including creation, modification, retrieval, cancellation, and completion of product orders.

2. Overview of Certified API

TMF-622 Product Ordering Management API provides a standardized solution to support Product Order lifecycle management and order fulfillment operations.
This API allows the following operations:

Product Order Operations:

Create a Product Order – Submit new product orders with single or multiple order items

Retrieve a Product Order – Get detailed information about a specific product order

Retrieve a list of Product Orders – Query and filter product orders based on various criteria

Update/Patch a Product Order – Modify existing product order attributes and order items

Delete a Product Order – Remove a product order (where applicable based on order state)
Cancel Product Order Operations:

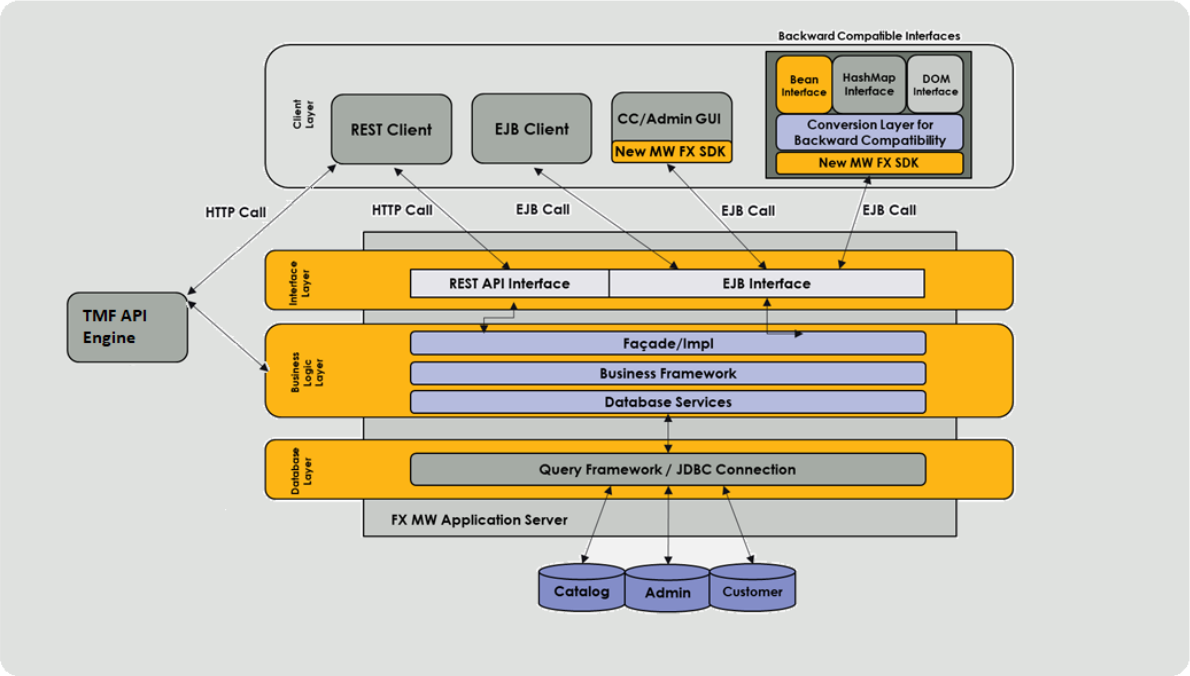

TM Forum 2026. All Rights Reserved.

Create a Cancel Product Order – Initiate cancellation requests for existing product orders

Retrieve a Cancel Product Order – Get cancellation request details and status

Retrieve a list of Cancel Product Orders – Query cancellation requests
