China Telecom CNOS-BSS

***TM Forum Open API Name and Release Version:***

*TMF668 – Partnership Management V4.0.0*

***Date: 11/06/2026***

## 1. What Product or Solution does your API support?

China Telecom CNOS (New-Generation Cloud Network Operation System) is an enterprise-level operation system that integrates and upgrades the existing OSS (for network operation), BSS (for business operation), and MSS. It is one of the main carriers for China Telecom's digital, automated, and intelligent operation management, and an important component of China Telecom digital platform.

The capabilities provided by various capability centers and applied in various application scenario in the CNOS are uniformly aggregated and encapsulated through the atomic capability platform to achieve capability sharing. CNOS and the data middleware enable the interconnection and sharing of production data, and empower production operation through the big data and AI capabilities of the data middleware. Meanwhile based on the unified technology platform of PaaS components, IaaS, and general capabilities of the business centers, cloud deployment and development operation are integrated.

The "Partnership Management API" (TMF668) serves as one of the core components of CNOS's Partner Center, facilitating the onboarding process of partnership. The Partner Center utilizes this API to integrate with external applications.

## 2. Overview of Certified API

- TMF668 Partnership Management API

Standardized mechanisms for creating partnership types. It is one of the APIs involved in an onboarding process. Identifies a type of partnership between parties, including the list of role types that are permitted (i.e. Buyer, Seller, Developer). Role types may refer to agreement specifications to be signed by parties playing the role.

The API allows the retrieval, creation, update, and deletion of partnership type and its owned sub-resources.
