*China Telecom Corporation Limited.*

***Product Name and Release Version:***

China Telecom CNOS-BSS

***TM Forum Open API Name and Release Version:***

*TMF635 – Product Usage Management V4.0.0*

***Date: 12/06/2026***

## **1. What Product or Solution does your API support?**

China Telecom CNOS (New-Generation Cloud Network Operation System) is an enterprise-level operation system that integrates and upgrades the existing OSS (for network operation), BSS (for business operation), and MSS. It is one of the main carriers for China Telecom's digital, automated, and intelligent operation management, and an important component of China Telecom digital platform.

The capabilities provided by various capability centers and applied in various application scenario in the CNOS are uniformly aggregated and encapsulated through the atomic capability platform to achieve capability sharing. CNOS and the data middleware enable the interconnection and sharing of production data, and empower production operation through the big data and AI capabilities of the data middleware. Meanwhile based on the unified technology platform of PaaS components, IaaS, and general capabilities of the business centers, cloud deployment and development operation are integrated.

The "Product Usage Management API" (TMF635) serves as one of the core components of CNOS's Customer Service Center, facilitating the creation and updating of product usage. The Customer Service Center utilizes this API to integrate with external applications.

## **2. Overview of Certified API**

- TMF635 Product Usage Management API

Provides a standardized mechanism for usage management, including the creation, update, retrieval, import, and export of a collection of usages. The API manages both rated and non-rated usage. For example, it allows a service provider to (1) retrieve usage generated by a partner service platform for rating purposes and (2) provide rated usage to a partner for consumption follow-up.

### 3. Architectural View
