

TM Forum Open APIs Conformance Certification

Company Name:

China Telecom Corporation Limited.

Product Name and Release Version:

China Telecom CNOS-OSS

TM Forum Open API Name and Release Version:

TMF652 – Resource Order Management v4.0.0

Date: 12/06/2026

1. What Product or Solution does your API support?

China Telecom CNOS (New-Generation Cloud Network Operation System) is an enterprise-level operation system that integrates and upgrades the existing OSS (for network operation), BSS (for business operation), and MSS. It is one of the main carriers for China Telecom's digital, automated, and intelligent operation management, and an important component of China Telecom digital platform.

The capabilities provided by various capability centers and applied in various application scenario in the CNOS are uniformly aggregated and encapsulated through the atomic capability platform to achieve capability sharing. CNOS and the data middleware enable the interconnection and sharing of production data, and empower production operation through the big data and AI capabilities of the data middleware. Meanwhile based on the unified technology platform of PaaS components, IaaS, and general capabilities of the business centers, cloud deployment and development operation are integrated.

The “Resource Order Management API” (TMF652) is a core component of CNOS’s Resource Center. It serves as a key enabler for placing resource orders, providing standardized order management capabilities for creating, updating, and querying resource orders.

2. Overview of Certified API

- TMF652 Resource Order Management API v4.0.0

Resource Order API provides a standard mechanism for placing a Resource Order with all necessary order parameters. A Resource Order is created based on a resource candidate that is defined in the resource catalog. The Resource candidate is an entity that makes a Resource Specification available to a resource catalog.
