

TM Forum Open APIs Conformance Certification

Company Name:

ENTEEL

Product Name and Release Version:

Open eXperience Layer 2026

TM Forum Open API Name and Release Version:

TMF677 – Usage Consumption Management v.5.0.0

Date: 15/06/2026

1. What Product or Solution does your API support?

Entel's API Platform has encapsulated and instantiated the Usage Consumption Management API TMF677 to standardized privacy profile types.

Communication Service Providers (CSPs) are constantly working to make their platforms more connected and adaptable. But everytime a new feature is introduced, it often means building a new API or making changes to multiple systems. This slows down the launch process, making it harder to meet market demand and missing out on potential revenue.

To move faster and deliver better, more tailored experiences, CSPs need to adopt standard APIs like OpenAPI-TMF. These standards help everyone, from CSPs to vendors, speak the same technical language. That means simpler integration, quicker project delivery, and a smoother path to innovation.

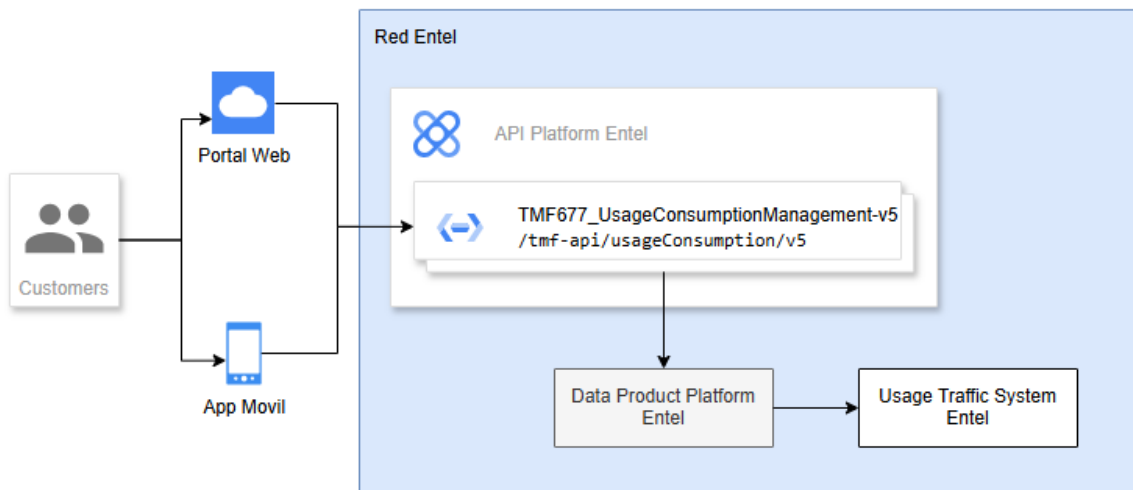

2. Overview of Certified API

The Usage Consumption API provides a standardized mechanism for privacy profile types, privacy profiles and privacy agreements such as creation, update, retrieval, deletion and notification of events.

#	Resource	API Overview	Operations Supported
1	QueryUsageConsumption	Allows consumers to request a usage consumption report for a given product, service, or resource. Supports both synchronous and asynchronous query patterns, with filtering and field projection capabilities.	GET POST

2	UsageConsumptionReport	Represents the result of a usage consumption query, containing detailed consumption data for a product, service, or resource. Supports retrieval with field filtering and projection.	GET
---	------------------------	---	-----
