*TMF645 – Service Qualification Management v.5.0.0*

***Date: 15/06/2026***

# 1. What Product or Solution does your API support?

Entel's API Platform has encapsulated and instantiated the Service Qualification Management API TMF645 to standardized privacy profile types.

Communication Service Providers (CSPs) are constantly working to make their platforms more connected and adaptable. But every time a new feature is introduced, it often means building a new API or making changes to multiple systems. This slows down the launch process, making it harder to meet market demand and missing out on potential revenue.

To move faster and deliver better, more tailored experiences, CSPs need to adopt standard APIs like OpenAPI-TMF. These standards help everyone, from CSPs to vendors, speak the same technical language. That means simpler integration, quicker project delivery, and a smoother path to innovation.

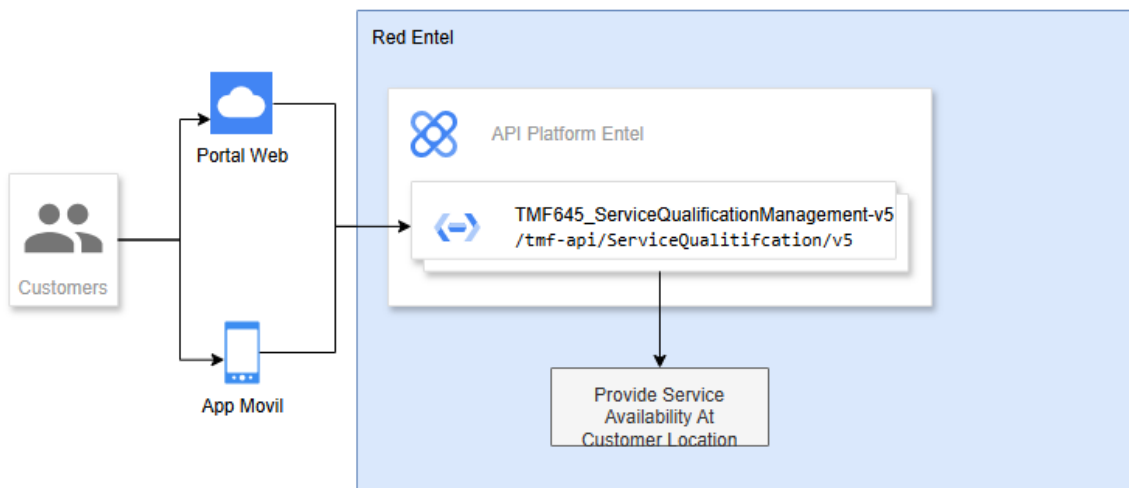

## 1. Overview of Certified API

The Service Qualification API provides a standardized mechanism for privacy profile types, privacy profiles and privacy agreements such as creation, update, retrieval, deletion and notification of events.

#	Resource	API Overview	Operations Supported
1	QueryServiceQualification	Service Qualification API is one of Pre-Ordering Management API Family. Service Qualification API goal is to provide service technical eligibility. Since v4 the API is split in 2 resources to distinguish specific service qualification request to be performed on a described configured service (or a list of configured services) from a retrieval of services eligible for a given context. The API allows to manage synchronous as asynchronous eligibility response (eligibility provided in POST	GET GET BY ID POST PATCH DELETE

		response or later with an id and state provided ).	
2	checkServiceQualification	This resource is used to check a configured service eligibility (or a list of services). A qualification result is provided in response. Requested could ask for result reason (unavailability or availability) and/or for alternate proposal	GET POST GET BY ID PATCH DELETE
