***TM Forum Open API Name and Release Version:***

*TMF639 – Resource Inventory Management v.4.0.0*

***Date: 16/06/2026***

# 1. What Product or Solution does your API support?

Entel's API Platform has encapsulated and instantiated the Resource Inventory Management API TMF639 to standardize the management and inventory tracking of network and service resources.

Communication Service Providers (CSPs) are constantly working to make their platforms more connected and adaptable. But every time a new feature is introduced, it often means building a new API or making changes to multiple systems. This slows down the launch process, making it harder to meet market demand and missing out on potential revenue.

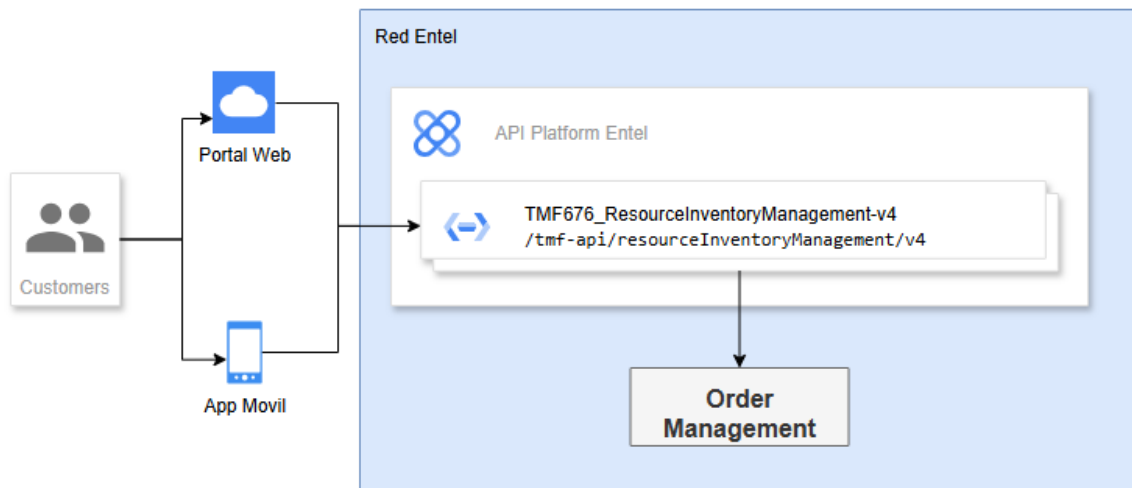

To move faster and deliver better, more tailored experiences, CSPs need to adopt standard APIs like OpenAPI-TMF. These standards help everyone, from CSPs to vendors, speak the same technical language. That means simpler integration, quicker project delivery, and a smoother path to innovation.

## 1. Overview of Certified API

The Resource Inventory Management API provides a standardized mechanism for managing the inventory of network and service resources, including creation, update, retrieval, deletion and notification of events.

| # | Resource | API Overview  | Operations Supported   |
|---|----------|---|--|
| 1 | resource | A Resource represents a physical or logical entity in the inventory whose lifecycle can be managed through standard operations. | <b>Resource Inventory</b><br>GET<br>POST<br>GET BY ID<br>PATCH<br>DELETE |
