***TM Forum Open API Name and Release Version:***

*TMF674 – Geographic Site Management v.4.0.0*

***Date: 16/06/2026***

# 1. What Product or Solution does your API support?

Entel's API Platform has encapsulated and instantiated the Geographic Site Management API TMF674 to standardized privacy profile types.

Communication Service Providers (CSPs) are constantly working to make their platforms more connected and adaptable. But every time a new feature is introduced, it often means building a new API or making changes to multiple systems. This slows down the launch process, making it harder to meet market demand and missing out on potential revenue.

To move faster and deliver better, more tailored experiences, CSPs need to adopt standard APIs like OpenAPI-TMF. These standards help everyone, from CSPs to vendors, speak the same technical language. That means simpler integration, quicker project delivery, and a smoother path to innovation.

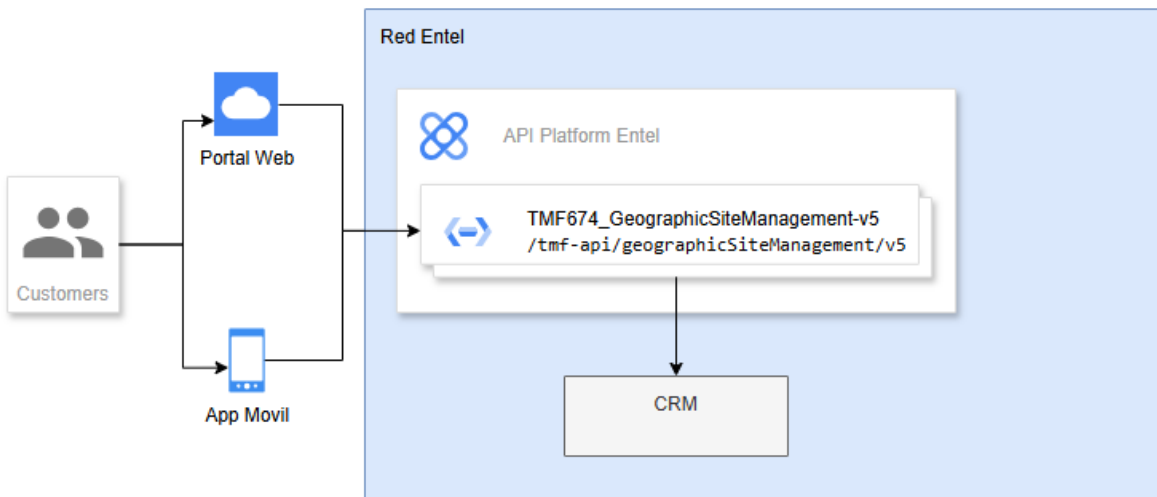

## 1. Overview of Certified API

The Geographic Site API provides a standardized mechanism for privacy profile types, privacy profiles and privacy agreements such as creation, update, retrieval, deletion and notification of events.

#	Resource	API Overview	Operations Supported
1	GeographicSite	This API covers the operations to manage (create, read, delete) sites that can be associated to a customer, an account, a service delivery or other entities. It defines a Site as a convenience class that allows to easily refer to places important to other	<b>Resource Order</b> GET POST GET BY ID PATCH DELETE

		<p>entities, where a geographic place is the entity that can answer the question “where?”, allowing to determine where things are in relation to the earth's surface, and can be represented either in a textual structured way (geographic address) or as a geometry referred to a spatial reference system (geographic location).</p>
