

TM Forum Open APIs Conformance Certification

Company Name:

Entel

Product Name and Release Version:

Open eXperience Layer 2026

TM Forum Open API Name and Release Version:

TMF702 – Resource Activation and Configuration

Management v.4.0.0

Date: 16/06/2026

1. What Product or Solution does your API support?

Entel's API Platform has encapsulated and instantiated the Resource Activation and Configuration Management API TMF702 to standardize the lifecycle management of network and service resources.

Communication Service Providers (CSPs) are constantly working to make their platforms more connected and adaptable. But every time a new feature is introduced, it often means building a new API or making changes to multiple systems. This slows down the launch process, making it harder to meet market demand and missing out on potential revenue.

To move faster and deliver better, more tailored experiences, CSPs need to adopt standard APIs like OpenAPI-TMF. These standards help everyone, from CSPs to vendors, speak the same technical language. That means simpler integration, quicker project delivery, and a smoother path to innovation.

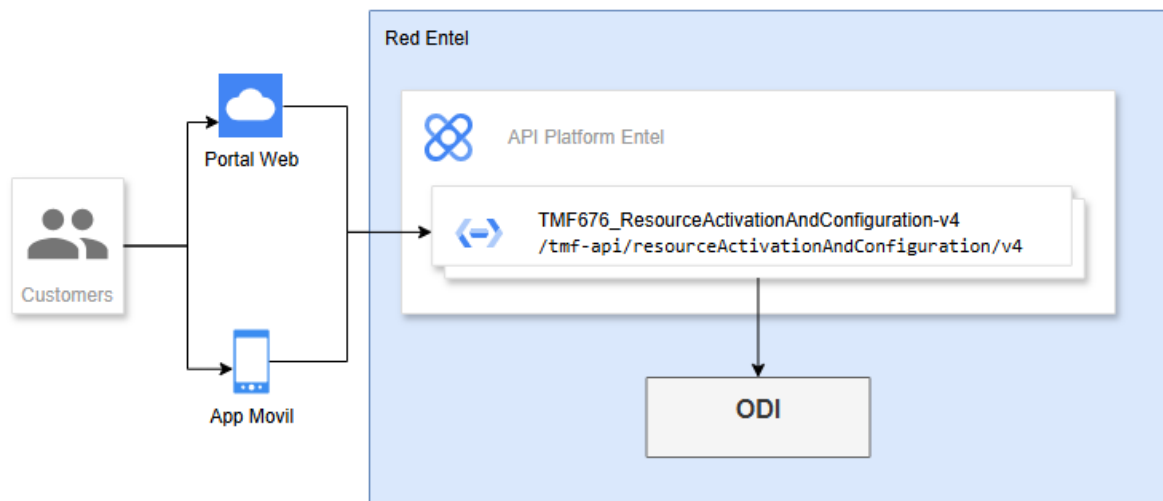

1. Overview of Certified API

The Resource Activation and Configuration Management API provides a standardized mechanism for managing the lifecycle of network and service resources, including creation, update, retrieval, deletion and notification of events.

#	Resource	API Overview	Operations Supported
1	resource	A Resource represents a network or service resource whose lifecycle is managed through activation, configuration,	Resource Management GET POST GET BY ID PATCH DELETE

		and monitoring operations. ones.
