*TMF666 – Account Management v.5.0.0*

***Date: 16/06/2026***

# 1. What Product or Solution does your API support?

Entel's API Platform has encapsulated and instantiated the Account Management API TMF666 to standardize the management of customer accounts, billing, and financial information.

Communication Service Providers (CSPs) are constantly working to make their platforms more connected and adaptable. But every time a new feature is introduced, it often means building a new API or making changes to multiple systems. This slows down the launch process, making it harder to meet market demand and missing out on potential revenue.

To move faster and deliver better, more tailored experiences, CSPs need to adopt standard APIs like OpenAPI-TMF. These standards help everyone, from CSPs to vendors, speak the same technical language. That means simpler integration, quicker project delivery, and a smoother path to innovation.

## 1. Overview of Certified API

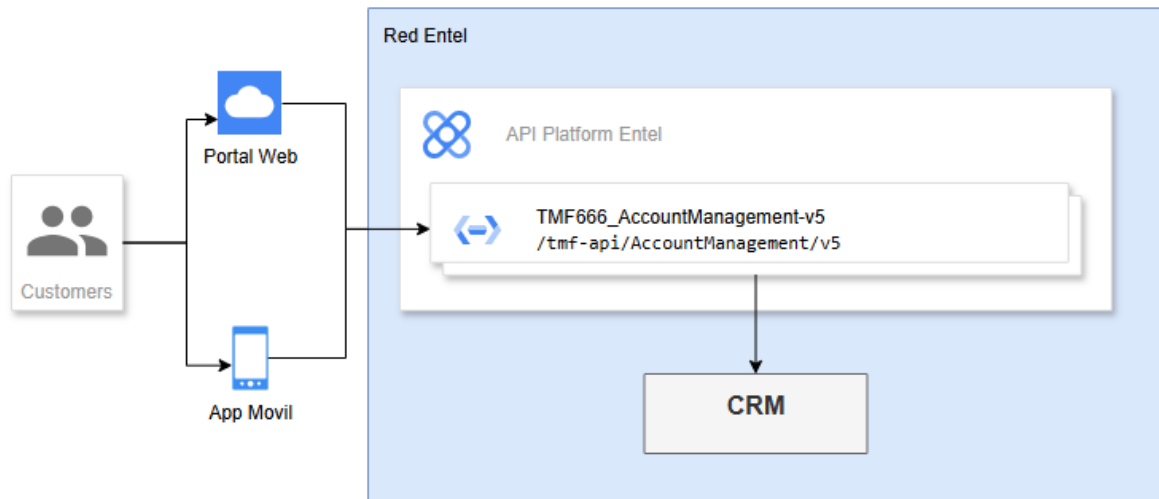

The Account Management API provides a standardized mechanism for managing party accounts, billing accounts, financial accounts, and related entities, including creation, update, retrieval, deletion and notification of events.

#	Resource	API Overview	Operations Supported
1	billingAccount	A party account used for billing purposes. It includes a description of the bill structure (frequency, presentation media,	<b>Account Management</b> GET POST GET BY ID PATCH DELETE

		format and so on).	
2	partyAccount	Account used for billing or settlement purposes concerning a given party (an organization or an individual). It is a specialization of entity Account.	<b>Account Management</b> GET POST GET BY ID PATCH DELETE
3	financialAccount	An account of money owed by a party to another entity in exchange for goods or services that have been delivered or used.	<b>Account Management</b> GET POST GET BY ID PATCH DELETE
4	settlementAccount	A party account used for settlement purposes. It includes a description of the bill structure (frequency, presentation media, format and so on).	<b>Account Management</b> GET POST GET BY ID PATCH DELETE
5	billingCycleSpecification	A detailed description of when to initiate a	<b>Account Management</b> GET

		billing cycle and the various sub steps of a billing cycle.	POST GET BY ID PATCH DELETE
6	billFormat	A detailed description of the way in which a bill is presented.	<b>Account Management</b> GET POST GET BY ID PATCH DELETE
7	billPresentationMedia	A mean of communicating a bill, supported by the associated bill format. For example, post mail, email, web page.	<b>Account Management</b> GET POST GET BY ID PATCH DELETE
