

TM Forum Open APIs Conformance Certification

Company Name:

ENTEL

Product Name and Release Version:

Open eXperience Layer 2026

TM Forum Open API Name and Release Version:

TMF760 – Product Configuration Management

v.5.0.0

Date: 09/07/2026

1. What Product or Solution does your API support?

Entel's API Platform has encapsulated and instantiated the Product Configuration Management API TMF760 to provide a standardized mechanism for product configuration management, such as validating and pricing a configured product, where a product configuration represents the set of selected characteristics and components of a product that a customer can order.

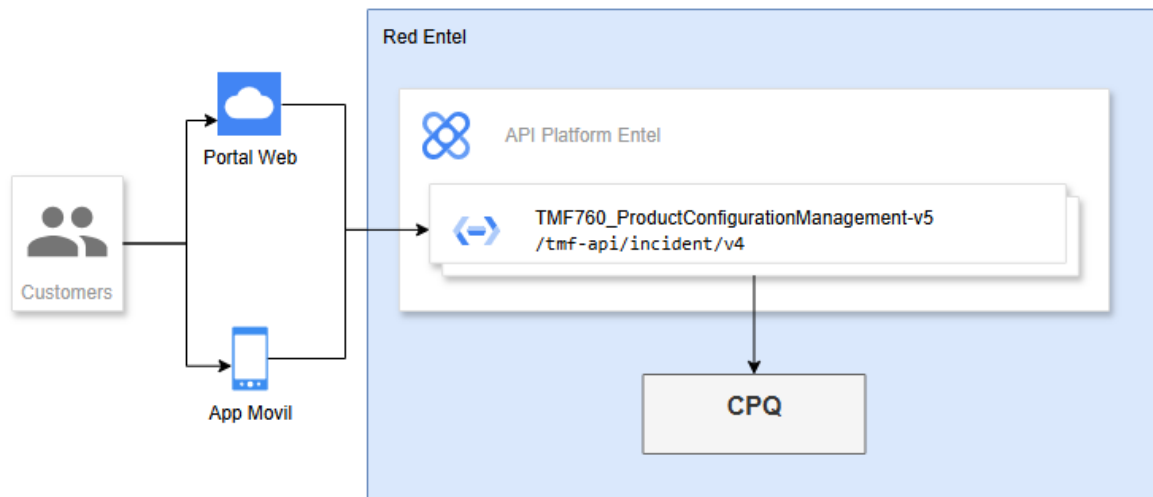

Communication Service Providers (CSPs) are constantly working to make their platforms more connected and adaptable. But every time a new feature is introduced, it often means building a new API or making changes to multiple systems. This slows down the launch process, making it harder to meet market demand and missing out on potential revenue.

To move faster and deliver better, more tailored experiences, CSPs need to adopt standard APIs like OpenAPI-TMF. These standards help everyone, from CSPs to vendors, speak the same technical language. That means simpler integration, quicker project delivery, and a smoother path to innovation.

2. Overview of Certified API

The Product Configuration Management API provides a standardized interface for validating and pricing product configurations, compliant with TMF760 specification. It supports checking the validity of a configuration and calculating its associated price, ensuring configured products meet the defined business rules. This API is essential for enabling guided product configuration during the sales process, and supports operations based on flexible query criteria.
