

TM Forum Open APIs Conformance Certification

Company Name: _____

Evergent Technologies

Product Name and Release Version:

Evergent Monetization CCB and 3.0

TM Forum Open API Name and Release Version:

TMF 666 Account Management API V5.0.0

Date: 07/08/2026

1. What Product or Solution does your API support?

Our product “Customer Care and Billing” has different modules to support Customer life cycle, Billing , Product management, Back Office and Messaging capabilities.

Billing management includes handling payment and billing related CRUD

operations. All these APIs interact with Billing management module to perform the CRUD operations.

2. Overview of Certified API

The primary objective of the **TMF666 Account Management API** is to manage different types of customer accounts used within the billing and financial domains. The API enables clients to create, retrieve, update, and delete account-related resources through standard RESTful operations.

The following HTTP methods are supported:

- **POST** – Create a new resource
- **GET** – Retrieve an existing resource
- **PATCH** – Partially update an existing resource
- **DELETE** – Delete an existing resource

The certification scope includes the following account and related resources:

Resource	Description	Endpoint
Billing Account	Creates and manages billing accounts associated with customers.	tmf-api/accountManagement/v5/billingAccount
Financial Account	Creates and manages financial accounts used for payment and financial transactions.	tmf-api/accountManagement/v5/financialAccount
Settlement Account	Creates and manages settlement accounts used for financial settlements.	tmf-api/accountManagement/v5/settlementAccount
Bill Format	Creates and manages bill format definitions used for bill generation and presentation.	tmf-api/accountManagement/v5/billFormat
Bill Presentation Media	Creates and manages bill presentation media preferences (for example, email,	tmf-api/accountManagement/v5/billPresentationMedia

	paper, or electronic delivery).
Billing Cycle Specification	Creates and manages billing cycle specifications that define billing schedules and cycles.

Billing Acc API: `tmf-api/accountManagement/v5/billingAccount`
