REACH Statement

The European Union Regulation (EC) 1907/2006 is the Registration, Evaluation, Authorization and Restriction of Chemicals (REACH). The regulation establishes specific duties and obligations on companies in the European Union (EU) that manufacture or import substances on their own, in preparations, or in articles.

- Under the structure of the REACH Regulation, ASC Engineered Solutions is a supplier of “articles” to our customers. We do not manufacture or supply “substances” or “preparations” and our processes do not involve the “intentional release of substances.” Substances contained in articles must be registered only if they are intended to be released under normal or reasonably foreseeable conditions of use. The substances contained in pipe fittings are not intended to be released, and therefore ASC Engineered Solutions does not intend to register any substances.
- Articles that contain Substances of Very High Concern (SVHC) above the concentration limit of 0.1 % on an article level, downstream users must be informed about these substances, even if the chemical substance will not be released under normal or reasonably foreseeable conditions of use. ASC Engineered Solutions confirms that with the exception of SCI and FPPI leaded and “lead-free” bronze fittings and valves, and certain ARC rubber formulations its products do not contain REACH SVHC Candidate substances above the applicable threshold (0.1%). Please note that we do not routinely test for these materials.
