This is to certify that the Henderson Plant uses approximately 60% recycled material by weight in the manufacturing and assembly of various carbon steel and forged steel products, of which approximately 80% is pre-consumer and 20% is post-consumer. The Henderson Plant uses approximately 98% recycled material by weight in the assembly of various cast iron products, of which 100% is pre-consumer. This estimation is based upon an analysis completed by surveying the vendors of our purchased raw materials and in-process subcomponents.

Note that this percentage does not include an estimation of recycled content in fasteners as the supplier could not provide an estimate.

Henderson's Quality System is registered and assessed to ISO 9001:2015. A copy of the current certificate is available upon request.

Respectfully Submitted,

Rhett Woody  
Engineering Manager
