

RECYCLED CONTENT CERTIFICATE

This is to certify that ASC Engineered Solutions Columbia Plant products contain 95% of recycled and recovered materials.

The 95% recycled-content in our malleable, gray (cast), and ductile (nodular) iron products, such as threaded and grooved fittings, hangers, flanges and valve castings is mostly of pre-consumer recycled materials. They may consist of trimmings, steel scrap and other by-products generated by other manufacturers.

The recycled materials also include plate and structural steel and rail crop.

We purchase these above mentioned to-be-recycled materials from established/certified supplies. They must pass ASC's stringent quality inspection process, including mandatory radiation screening before they are accepted and used in our foundry melting process.

Certified for and on behalf of ASC Engineered Solutions – Columbia Plant.
