

Living with memory loss? Can sharing information help in case of emergency?

We invite you to take part in a study to make a system that allows emergency medical services (EMS) to send alerts to your clinicians if you are cared for or transported by EMS due to an emergency. We want to understand if this technology can help others and their healthcare providers better communicate and manage your health in cases of emergency and prevent episodes of confusion.

This study is being conducted by researchers at Dell Medical School and the UT-Health Austin Comprehensive Memory Center

Qualified participants must:

- Be older than 18 years old and diagnosed with mild cognitive impairment or dementia

Qualified participants will be asked to:

- Share your contact information and health records with Dell Medical School medical researchers and Emergency Medical Services.

**If you would like to participate or if you have questions,
contact Paulina Devora, B.A. C.S.P, at 512-387-2025 or
Email: Paulina.Devora@austin.utexas.edu**

This study has been approved by The University of Texas at Austin Institutional Review Board.
